

BlogNest API

PHASE 02 OF 08 | REQUIREMENT ANALYSIS

Project overview

The BlogNest brief describes a modular blogging CMS API with draft and publishing workflows, role-based access for administrators, editors, authors, and readers, and AI-supported writing. It also covers categories and tags, comment moderation, media metadata, search, validation, and logging.

Project description

A role-aware content API for blog publishing, editorial workflows, categories, comments, media, search, and AI writing assistance.

Project status

Not stated in the source brief. Update this document when the team records an agreed status.

Project capabilities

- Blog drafts and publishing
- Editorial roles and approvals
- Categories, tags, and search
- Comments and media metadata

Phase description

Turn the validated problem into functional, non-functional, data-flow, and technology requirements.

Project-specific phase focus

Define role permissions, post lifecycles, taxonomy, comments, media, search, and AI assistance.

Phase status and progress

Status: Not stated in the source material.

Progress: Not recorded in the source material.

Tasks and requirements

- [] Map the customer journey and touchpoints
- [] Diagram system data flows
- [] Document functional and non-functional requirements
- [] Choose and justify the technology stack
